Introduction

1. Brief history of intelligent control systems design technology	
1.1 Physical limitations and information bounds of classical control systems.....	2
1.2 General Structure of intelligent control system based on soft computing	3
2. Brief theoretical backgrounds of intelligent control system design based on stochastic simulation and a new soft computing technology	
2.1 Human control strategy description and fuzzy sets.....	6
2.1.1 Fuzzy set definition and its peculiarities.....	7
2.2 Fuzzy logic and its main peculiarities.....	12
2.2.1 Typical fuzzy logic operations.....	12
2.2.2 Fuzzy inference (or reasoning) process.....	13
2.2.3 From fuzzy logic to fuzzy systems and fuzzy controllers (FC)...	19
2.2.4 Typical fuzzifiers and defuzzifiers	20
2.2.5 Typical Fuzzy Models.....	21
2.3 Fuzzy PID control.....	25
3. Implementation of adaptation and optimization capabilities in intelligent control systems	
3.1 Genetic Algorithms (GA) for global optimization processes.....	27
3.1.1 Basic structure and mechanisms of GA.....	27
3.1.2 Theoretical foundation of GA.....	34
3.1.3 GA-based FC design.....	36
4. Fuzzy Neural Networks (FNN) for physical implementation of FC and its local optimization	
4.1 FNN implementation of fuzzy control.....	39
4.2 Supervised FNN learning.....	41
4.2.1 FNN parameters: example.....	42
4.2.2 Error back propagation algorithm for FNN parameters tuning.....	43
5. Physical criterion of optimization based on thermodynamic approach.....	44
6. Stages of SC technology development for Intelligent Control Systems Design....	48
6.1 Stochastic simulation system for TS design.....	50
6.2 Stage 2-1 (Step 1 Technology): Demonstration of efficiency of SC approach to ICS design with respect to advanced classical control.....	52
6.3 Robustness investigation of FNN based approach. Limitations of step 1 technology.....	58

6.4 Step 2 Technology based on SC Optimizer.....	60
6.4.1 SC Optimizer structure and its main functions.....	61
7. Benchmarks of smart control simulation for non-linear dynamic control objects...	65
7.1 Example 1 : Pendulum with variable length (Swing system).....	67
7.2 Example 2: Van der Pol oscillator.....	78
7.3 Example 3: Oscillator with hysteresis effects.....	100
7.4 Example 4: Coupled non-linear oscillator motion control problem.....	117
7.5 Example 5: Nonlinear oscillator with sizable nonlinear dissipative components.....	129
7.6 Example 6: Nonlinear oscillator with sizable nonlinear dissipative components.....	139
7.7 Example 7: Nonlinear Nose-Hoover oscillator	149
Conclusions.....	160
References.....	161
Appendix: Stochastic simulation theoretical backgrounds. Noise Modeler	
A.1 Stochastic simulation of random processes with required statistical characteristics based on forming filters: Fokker-Plank-Kolmogorov equations approach.....	163
